Research Fellowship in Biomimetics

Advanced Concepts Team, Directorate of Technical and Quality Management

ESTEC, Noordwijk, The Netherlands

ESA/RF-ESTEC(2015)003

Overview of the Advanced Concepts Team’s mission

The Advanced Concepts Team (ACT) is a group of research fellows (post-docs) and young graduates who originate from a broad variety of academic fields and generally aim at an academic career. Its task is to monitor, perform and foster research on advanced space systems, innovative concepts and working methods. It interacts externally almost exclusively with academia and operates as a truly interdisciplinary team bound to high scientific standards. Via its research, the team acts as an ESA-wide pathfinder to explore novel, potentially promising areas for ESA and the space sector, ranging from applied to basic fundamental research topics. An important task of the team is thus to communicate scientific trends and results, as input to the strategic planning of the Agency.

Research field

The team has entered the field of biomimetics in 2002 and has since then concentrated on research topics including sensing, control, actuation, and behaviour. Currently the team is working on innovative radiation protection shielding technologies, hibernation, bio-inspired depth perception by image defocus for landing applications and biomimetic sensing through changes in structural proteins.

Candidates are highly encouraged to get familiar with the research done in this field by the team (http://www.esa.int/gsp/ACT/bio/index.html) as well as on the overall research of the ACT and the main activities lines of ESA.

Overview of the field of research proposed – Duties and Tasks

The successful candidate will propose and carry out research focused on the topic of biomimetics. The areas of research are partly chosen by the successful candidate, based on his/her own expert judgements and insights into trends and developments, and personal motivation, and partly chosen by the team as to be in line with strategic directions of the Agency.

Scientifically she/he will in particular:

- Propose and perform research in the field of biomimetics linked to potential space applications, where appropriate together with universities of ESA Member States (in particular through the Ariadna programme);
- Monitor, liaise and where appropriate cooperation with international, European or national research programmes and projects linked to biomimetic research, putting these into a space perspective.
- Monitor developments in previously performed biomimetic research projects of the team.
As ACT researcher, she/he will:
- Publish results in peer-reviewed publications and use modern communication tools to communicate with the broader audience inside and outside ESA;
- Lead and assist interdisciplinary projects with other ACT Research Fellows and Young Graduate Trainees;
- Participate together with the team in the assessment of proposed space system concepts - these not being restricted only to biomimetics - and propose new concepts and assessment studies; and
- Perform and participate in assessments on subjects of strategic interest of ESA, provide in-house expertise to strategy development and ESA’s General Studies Programme.

Who can apply

The programme is open to suitably qualified women and men. Preference will be given to applications submitted by candidates within five years of receiving their PhD.

The Research Fellow Programme is open to nationals of the following states: Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal, Romania, Spain, Sweden, Switzerland, and the UK, or Canada as a Cooperating State, Estonia, Hungary, Latvia and Slovenia as European Cooperating States (ECS).

Required qualifications

Applicants must have obtained:
- a degree in biology, technical biology, physics, mathematics, informatics or a related field; and
- a PhD (completed before take up of duty) in biology (or eventually another discipline with a solid biomimetics focus), subject of the thesis being relevant to the description of the tasks outlined above.

Additional Requirements:
- interest in space science and technology;
- ability for and interest in prospective interdisciplinary research;
- aptitude to contextualise specialised areas of research and quickly assess their potential with respect to other domains and applications;
- academic networking to add functioning links to universities and research institutes;
- ability to work in a team, while being able to work individually and autonomously regarding his/her own personal research plans and directions;
- natural curiosity and a passion for new subjects and research areas;
- good methodological and organisation skills.
- Applicants must be fluent in English and/or French, the working languages of the Agency. A good proficiency in English is required.

Applicants should have good analytical and communication skills and should be able to work in a multi-cultural environment in an autonomous manner.

Applicants must be fluent in English and/or French, the working languages of the Agency. A good proficiency in English is required.
Specifities of the Research Fellowship in the Advanced Concepts Team

The position of Research Fellow at ESA’s Advanced Concepts Team is similar to a regular academic Post-Doc placement, however with a few notable key differences:

1. ACT RFs have no teaching obligations. However, they will be involved in the mentoring of Young Graduate Trainees and student interns within the team.
2. As the team does not have a professor-like position, ACT RFs are academically more independent than most post-docs. This implies more freedom but also more responsibility for their research directions and approaches.
3. ACT RFs are joining a diverse, changing and interdisciplinary research team embedded in a large space agency, in contrast to a more specialised, focused research group with close or similar competences.
4. ACT RFs need to actively reach out to other disciplines, to bring in their competences to interdisciplinary research projects and to encourage other researchers to join them in their core research projects.
5. ACT RFs need to communicate their expertise and research results internally and externally, including potential implications and importance for ESA’s long-term strategy.

How to Apply

Please fill in the online application form attaching to it, in one document only, your CV, your motivation letter and your research proposal.

Candidates must also arrange for up to three letters of reference to be sent by e-mail, before the deadline, to temp.htr@esa.int. The letters must be sent by the referees themselves with the candidate’s name mentioned in the subject of the email.

Applications satisfying the general conditions for eligibility and submitted by 16 April 2015, will be evaluated and successful applicants will be invited for an interview. All applications will be considered until the available post is filled. A first round of interviews is expected to take place in May/June 2015 timeframe, with the option of pre-screening interviews via videoconference.

Interested candidates are highly encouraged to visit the team’s website: http://www.esa.int/act as well as the ESA website: http://www.esa.int/

If you have questions about the Research Fellowship in the Advanced Concepts Team, please write an email to act@esa.int
